reporting

Problem Statement

Many rural smartphone users lack practical knowledge about digital topics: basic digital literacy, cyber security, how AI affects daily life, identifying fake news, and safe financial transactions. This gap increases vulnerability to fraud, misinformation, and unsafe practices.

Focus: practical, local examples so villagers can apply learning immediately.

Objectives

Create awareness

Explain core digital concepts in local language and simple terms.

Teach cyber safety

Practical tips: strong passwords, recognising scams, secure Wi-Fi use.

Explain AI simply

Everyday AI examples: voice assistants, camera suggestions, crop recommendations.

Detect fake news

Check sources, look for multiple confirmations, pause before sharing.

Safe digital payments

How to use UPI and bank apps securely; recognising payment frauds.

Encourage responsibility

Promote respectful, legal and purposeful technology use.

Why This Project is Needed

- Raise digital awareness so villagers can access services (e.g., government portals, health info).
- Reduce susceptibility to online fraud and financial loss.
- Limit spread of harmful misinformation that affects community decisions.
- Improve confidence using smartphones for education, markets and banking.
- Support inclusive growth by bridging the urban-rural digital divide.

Methodology — Plan of Action

Each step emphasises local language delivery, live demonstrations, role-plays, printed takeaways, and simple visuals to ensure understanding across age groups.

Expected Outcomes

Improved awareness

Practical skills to navigate basic apps and services.

Better cyber hygiene

Reduced password reuse and scam susceptibility.

AI awareness

Recognise helpful AI features and limitations.

Fake news resilience

Skills to verify information before sharing.

Safer payments

Confident use of UPI and bank apps with fraud awareness.

Timeline of Activities

Timing emphasises community availability (market days, evenings) and repeated short sessions to reinforce learning.

Week	Activity
Week 1	Topic selection & team planning
Week 2	Permission, material design & training
Week 3	Final preparation & travel arrangements
Week 4	Village visit – introductory sessions
Week 5	Awareness program: demos, role-plays, pamphlets
Week 6	Data collection, feedback from participants
Week 7	Report preparation and review
Week 8	Final presentation & dissemination of materials
